

BREMCO CONSTRUCTION INC.

Estes Express Lines Fontana, California

Client: Estes Express Lines
Architect: Howard Parsell Company
Budget: 5.5 million
Size: 49,585 SF

Adding 78 dock doors to an existing terminal Bremco built over 20 years ago, this cross dock facility combines a Butler pre-engineered metal building and dock high concrete tilt up construction performed by Bremco's in house concrete crew. The new 2 story, 21,150 SF shop building also features a Butler metal building structure combined with masonry construction to achieve a 22' high clear space. With a wash bay, warehouse, offices, fueling station and 24,000 gallons of diesel in two above ground storage tanks, the shop area allows Estes to service their fleet of vehicles under one roof.
